

# Recycle Your Data!

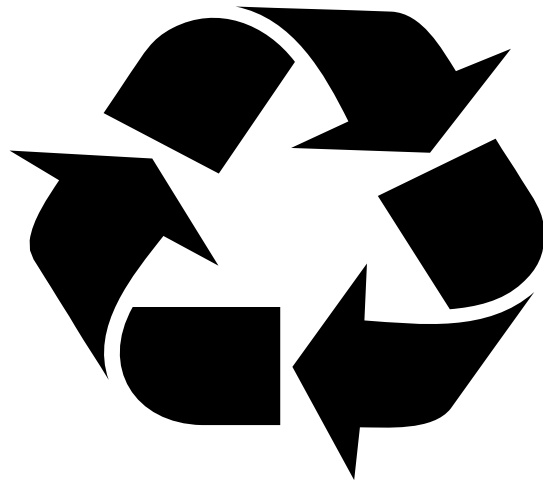

The data you have in your spreadsheet, database, or word processor can be the basis of a powerful head start for your work with Gage Management System.

We want you to be able to use GMS effectively and quickly to improve the quality of the work you do. By using data that you may already have in other less powerful calibration software packages, spreadsheets, or databases, we can convert this data into files that GMS can immediately use. This will save you valuable time as you begin using GMS by avoiding the task of reentry. We have extensive experience with conversions of data of almost any type.

Cost is always an important factor. For that reason we keep the cost low. Typical conversions range from \$100 to \$500 and can be completed in only two to three days. For firm conversion price quotes, all we need is a copy of your data and answers to a few simple questions.

So don't let your investment in the data you have accumulated in an older system be an impediment to your upgrading now to the power and flexibility of the Gage Management System.

Call or fax for specific information about converting your data today!
